TRANSPLANTING

Hawthorns AND Dogwoods

To Insure SUCCESS

*Solid ball of earth.
It cannot be broken by handling.*

Every one who had experience in transplanting Hawthorns and Flowering Dogwoods knows the difficulty in successfully moving them in the larger sizes.

This difficulty is eliminated almost, if not quite entirely, when they are moved with a good sound ball of earth.

We have a method of balling and burlapping them in such a manner that no matter how roughly the ball may be handled it will not crumble or break.

The burlap is stitched on a solid ball before it is lifted from the hole, and is wrapped on just as smoothly as the leather cover on a base ball.

It is unnecessary to remove the burlap when planting. Just set the ball in the ground, pack earth firmly about it and in a week or two the burlap rots and the new roots penetrate it.

This method of handling these trees will insure ninety-five to one hundred per cent. success.

It is nothing new with us. We have been selling, for years, these trees and others handled in this manner with the greatest measure of success.

The illustration is of a Hawthorn dug with our "Special Ball."

When ordering specify "with Special Ball," otherwise they will be dug without earth.

Prices include "Special Ball" but cost of box and packing will be additional.

If car load lots are ordered there are no packing charges.

PRICES.

	Per 10	Per 100
Crataegus coccinea 5 to 6 ft.	\$15.00	\$125.00
6 to 7 ft.	18.50	160.00
7 to 8 ft.	20.00	175.00
Cornus florida 5 to 6 ft.	13.50	110.00
6 to 8 ft.	15.00	125.00

When ordering say if you want "Tree Form" or "Bush Form."
